## Regular Staff Training

- ▶ On the importance and value of ordering and patient completion of microalbumin and A1C lab tests.
  - ▶ Patient health improvement
  - ▶ Diabetic Management
  - ► Insurance company
  - ▶ Incentive based programs
- ► Staff trained multiple times throughout the year at staff meetings and one on one training as needed by PCMH/Hedis Coordinator and providers.

#### Diabetic Chronic Care Visits

- Most diabetic patients are seen in the office quarterly for their chronic care visit.
- Exceptions would be patients managed by endocrinology and very well controlled diabetic patients that are seen at least biannually.

3

### Microalbumin

- ▶ Microalbumin is instructed to be ordered at the first non-acute visit of the year for all diabetic patients as a standing order in our office regardless of the appointment reason.
- ► Most insurance companies pay for one microalbumin lab order per calendar year.
- ► Making this a standing order has:
  - ▶ Improved the percentages of patients that complete the microalbumin lab test.
  - ▶ Improved the clinical outcome results.
  - ▶ Improved administrative performance results.
  - Allows more time to evaluate and/or reevaluate patient treatment plans as necessary.

#### A<sub>1</sub>c

- ► A1c labs are encouraged to be ordered every three months for all uncontrolled A1c diabetic patients.
- ▶ All uncontrolled A1c patients are referred to work with our in office care management department.

5

## Diabetic Registry/Performance Report

- ▶ A Diabetic Registry and Performance report is run at least biannually
- ▶ Provided to the corresponding primary care physician, the medical director and the care management department.
- ► The diabetic registry includes patients most recent A1c results, last microalbumin date, vitals, demographics and other structured fields.
- ▶ Allow for a detailed and broad view of the diabetic patients in the practice.
- ► Individual provider statistics and overall office statistics allow for appropriate design of training and patient improvement plan training with clinical teams.
- ▶ Utilized to perform recalls to close and improve patient gaps in care.

# **Chart Preparation**

- ► A Medical Assistant prepares the patients chart 1-2 business days prior to the patients appointment.
- ► Chart prep utilizes insurance registries, patient portals, internal clinical alerts in the patients chart to determine open gaps in care.
- ► Gaps in care are transferred to the patient encounter sheet prior to the patients appointment.
- Improve medical assistant and provider team in treating patient date of service.
